Disproof by Counter Example

E.g. Show that the statement “ $n^2 - n + 1$ is a prime number for all values of n ” is untrue.

Ans. $n=5$ since $5^2 - 5 + 1 = 21$ and 21 is not a prime number.

Therefore, the statement is untrue.

a) Prove by counter-example that the product of an odd and even number is never a perfect square.
