### BHASVIC MαTHS A1 DOUBLES ASSIGNMENT 19A

1

#### Find

(a) 
$$\int 3e^{4x+2}dx$$

(b) 
$$\int (4e^{4-x} + 2)dx$$

$$(c) \int \frac{e^{2x}+1}{4e^{-x}}$$

### BHASVIC MαTHS A1 DOUBLES ASSIGNMENT 19A

2

The functions f and g are defined by

$$f: x \to 5x + 2, x \in \mathbb{R}$$

$$g: x \to \frac{1}{x}$$
,  $x \in \mathbb{R}$ ,  $x \neq 0$ 

(a) Find the following functions, stating the domain in each case.

(i) 
$$f^{-1}(x)$$

$$(ii)$$
 fg  $(x)$ 

$$(iii) (fg)^{-1} (x)$$

(b) Solve the equation  $f^{-1}(x) = fg(x)$ , giving your answers to 2 decimal places.

3

A parachutist drops from a helicopter H and falls vertically from rest towards the ground. Her parachute opens 2 s after she leaves H and her speed then reduces to 4 m s<sup>-1</sup>. For the first 2 s her motion is modelled as that of a particle falling freely under gravity. For the next 5 s the model is motion with constant deceleration, so that her speed is 4 m s<sup>-1</sup> at the end of this period. For the rest of the time before she reaches the ground, the model is motion with constant speed of 4 m s<sup>-1</sup>.

- (a) Sketch a speed-time graph to illustrate her motion from *H* to the ground.
- (b) Find her speed when the parachute opens.

A safety rule states that the helicopter must be high enough to allow the parachute to open and for the speed of a parachutist to reduce to 4 m s<sup>-1</sup> before reaching the ground. Using the assumptions made in the above model,

(c) find the minimum height of *H* for which the woman can make a drop without breaking this safety rule.

Given that H is 125 m above the ground when the woman starts her drop,

- (d) find the total time taken for her to reach the ground.
- (e) State one way in which the model could be refined to make it more realistic.

### BHASVIC MαTHS A1 DOUBLES ASSIGNMENT 19A

4

(a) A particle rests in limiting equilibrium on a plane inclined at 30° to the horizontal.

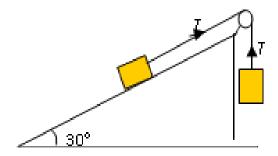

Determine the acceleration with which the particle will slide down the plane when the angle of inclination is increased to 45°.

(b) A lift is accelerating upwards at 1.5 m s<sup>-2</sup>. A girl of mass 30 kg is standing in the lift. Modeling the girl as a particle, find the force between her and the floor of the lift.

5

### Draw a force diagram and resolve forces for each block in appropriate directions.

A block of 5kg rests on a slope which is 30° to the horizontal it is connected by a light inextensible string which passes through a frictionless pulley to a second block of 1kg. Find the tension in the string, the acceleration of the blocks and the direction of travel.

6

An object moves in a straight line from a point O. at time t seconds the object has acceleration, a, where

$$a = -\cos 4\pi t \text{ m s}^{-2}, 0 \le t \le 4$$

When t = 0, the velocity of the object is 0 m s<sup>-1</sup> and its displacement is 0 m. Find:

- (a) An expression for the velocity at time *t* seconds.
- (b) The maximum speed of the object
- (c) An expression for the displacement of the object at time *t* seconds.
- (d) The maximum displacement of the object from O
- (e) The number of times the object changes direction during its motion.

7

Two cyclists, C and D, are travelling with constant velocities  $(5\mathbf{i} - 2\mathbf{j})$  m s<sup>-1</sup> and  $8\mathbf{j}$  m s<sup>-1</sup> respectively relative to a fixed origin O.

(a) Find the velocity of C relative to D.

At noon, the position vectors of C and D are  $(100\mathbf{i} + 300\mathbf{j})$  m and  $(150\mathbf{i} + 100\mathbf{j})$  m respectively, referred to O. At t seconds after noon, the position vector of C relative to D is  $\mathbf{s}$  metres.

- (b) Show that  $\mathbf{s} = (-50 + 5t) \mathbf{i} + (200 10t) \mathbf{j}$ .
- (c) By considering  $|\mathbf{s}|^2$ , or otherwise, find the value of t for which C and D are closest together.

### BHASVIC MαTHS A1 DOUBLES ASSIGNMENT 19A

8

P is the point (5, 6, -2), Q is the point (2, -1, 1) and R is the point (2, -3, 6).

- (a) Find the vectors  $\overrightarrow{PQ}$ ,  $\overrightarrow{PR}$  and  $\overrightarrow{QR}$
- (b) Hence, or otherwise, find the area of triangle *PQR*.

9

Prove that the derivative of  $\cos x$  is  $-\sin x$  from first principles

#### 10

Liquid dye is poured onto a large flat cloth and forms a circular stain, the area of which grows at a steady rate of  $1.5 \ cm^2 \ s^{-1}$ 

Calculate, correct to 3 s.f.,

- (a) the radius, in cm, of the stain 4 seconds after it started forming
- (b) the rate, in  $cm \ s^{-1}$ , of increase of the radius of the stain after 4 seconds

## BHASVIC MαTHS A1 DOUBLES ASSIGNMENT 19A

11

A curve has equation  $2x^2 + xy + y^2 = 14$ 

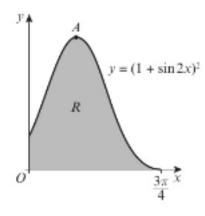

- (a) Show clearly that  $\frac{dy}{dx} = -\frac{4x+y}{x+2y}$
- (b) hence find the co-ordinates of the turning points of the curve.

12

Evaluate the following

$$\lim_{\delta x \to 0} \sum_{x=0}^{2} \frac{1}{\sqrt{4x+1}} dx$$

13

The Diagram shows the graph of  $y = (1 + \sin 2x)^2$ ,  $0 \le x \le \frac{3\pi}{4}$ 

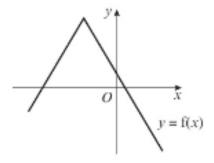

- (a) Show that  $(1 + 2\sin 2x)^2 \equiv \frac{1}{2}(3 + 4\sin 2x \cos 4x)$ .
- (b) Hence find the area of the shaded region R.
- (c) Find the coordinates of A, the turning point on the graph.

14

The function f is defined by

$$f(x) = -\frac{5}{3}|x+4| + 8, x \in \mathbb{R}$$

The diagram shows a sketch of the graph y = f(x)

- (a) State the range of f.
- (b) Give a reason why  $f^{-1}(x)$  does not exist.
- (c) Solve the inequality  $f(x) > \frac{2}{3}x + 4$ .
- (d) State the range of values of k for which the equation  $f(x) = \frac{5}{3}x + k$  has no solutions

15

$$f(x) = x^3 - 2x - 1$$

- (a) Show that the equation f(x) = 0 has a root,  $\alpha$ , at the interval  $1 < \alpha < 2$ .
- (b) Using  $x_0 = 1.5$  as a first approximation to  $\alpha$ , apply the Newton-Raphson procedure once to f(x) to find a second approximation to  $\alpha$ , giving your answer to 3 decimal places.

$$f(x) = x^2 - \frac{4}{x} + 6x - 10, x \neq 0$$

c) Use differentiation to find f'(x).

The root,  $\alpha$ , of the equation f(x) = 0 lies in the interval [-0.4, -0.3]

(d) Taking -0.4 as a first approximation to  $\alpha$ , apply the Newton-Raphson process once to f(x) to obtain a second approximation to  $\alpha$ . Give your answer to 3 decimal places.
