1. A stone is thrown up at an angle of $30^{\circ}$ to the horizontal with a speed of $30 \mathrm{~ms}^{-1}$ from the edge of a cliff 50 m above sea level. If the stone lands in the sea, calculate:
a) How long it is in the air,
b) How far from the base of the cliff it lands,
c) The speed and direction of the stone as it hits the water.
d) Show that after T secs it will be travelling at an angle $45^{0}$ below the horizontal.

$$
\text { where } \mathrm{T}=\frac{15(\sqrt{3}+1)}{g}
$$

2. The resultant force $\mathbf{F}$ Newtons acting on a particle of mass 0.5 kg at time $t \mathrm{~s}$ is given by: $\quad \mathbf{F}=\left(t^{2}-2\right) \mathbf{i}+(2 t+3) \mathbf{j}$
a) Find an expression for the acceleration of the particle after 3 secs.
b) Given that the velocity of the particle at time $t=0$ is $4 \mathbf{i} \mathrm{~ms}^{-1}$, find the speed after 3 secs.
3. A car has an engine of maximum power 15 kW . Calculate the force resisting the motion of the car when it is travelling at its maximum speed of $120 \mathrm{kmh}^{-1}$ on a level road. Assuming an unchanged resistance and taking the mass of the car to be 800 kg , calculate the maximum acceleration of the car when travelling at $60 \mathrm{kmh}^{-1}$ on a level road.
(Note: UNITS!)
4. A car of mass 1 tonne is moving at a constant velocity of 60 km per hour up an inclined road which makes an angle of $6^{\circ}$ with the horizontal.
a) Given that the non-gravitational resistance down the slope is 2000 N , find the rate at which the car is working,
b) If the engine has a maximum power output of 80 kw , calculate the maximum speed of the car up the same slope.

## Core consolidation

5. 

$$
\mathrm{f}(x)=5 \cos 2 x+12 \sin 2 x
$$

(a) Using a suitable R-Method involving Rcos or $\mathrm{R} \sin$, find the value of $R$ and the value of $\alpha$ to 3 decimal places.
(b) Hence solve the equation

$$
5 \cos 2 x+12 \sin 2 x=6 \quad \text { for } 0 \leq x<\pi
$$

(c) (i) Write down the maximum value of $f(x)$
(ii) Find the smallest positive value of $x$ for which this maximum value occurs.
6. The function $f$ is defined by

$$
